TopM – developing and
implementing software
solutions for your company

Company profile

Innovative software solutions

Cooperation starts with getting to know each other. We from TopM would like to show you who we are, what we are capable of and how we think. This includes not only our skills, but also our vision and values.

Increasing competition and highest quality requirements continually force companies to enhance quality and efficiency. In the field of functional software solutions, TopM in Bobingen near Augsburg has established itself as an innovative partner on the market for 25 years. Our focus ranges from standard solutions to complex and individual package solutions with supplementing complementary products.

net7	elius6	r6	san6	netlog
Single-unit and serial production	Wholesale and retail sector	Automotive and tyre sector	Health and medical sector	Aerospace engineering

Our core business is the programming and installation as well as the introduction to and training in customer-specific and future-proof software solutions in a wide range of applications and for a variety of sectors.

TopM stands for innovation – more than 1,700 customers in the German-speaking world and in Europe make us a reliable partner for your company's productivity.

with a standardised,
customisable GUI

The foundation of TopM's success

Economic and financial independence

Independence is one of the key criteria for success in today's market. TopM has full freedom of decision when it comes to technology as well as economics. TopM is in a position to make decisions on product development and company direction free from supplier and financial constraints.

TopM grows with each individual

We build our team by promoting each employee's skills and potential through regular training courses. In addition, we take on a number of apprentices each year to keep the company innovative and ensure the development of our staff in the future.

Securing our future

As a family-run business, TopM is well positioned for the future: The second generation is already part of the company and is ready to lead the business in a few years' time. Katrin and Stefan Herger and Julia Löw are involved in business operations and are thus ensuring TopM's future.

Quality comes first

Customer satisfaction is good – but never enough for TopM! Our team works hard to continuously improve software and service. Quality assurance and a systematic implementation of the criteria according to ISO 9001:2008 are tools that ensure TopM's success – therefore, senior management takes responsibility for this.

Efficient development processes

Here at TopM, we have always been thinking about the future. Thanks to internal change-management solutions and test robots, we have achieved a maximum of efficiency and innovation that allows our customers to advance and be even more successful! This is supported by communication solutions such as Bkat and SAM.

Successful and happy customers

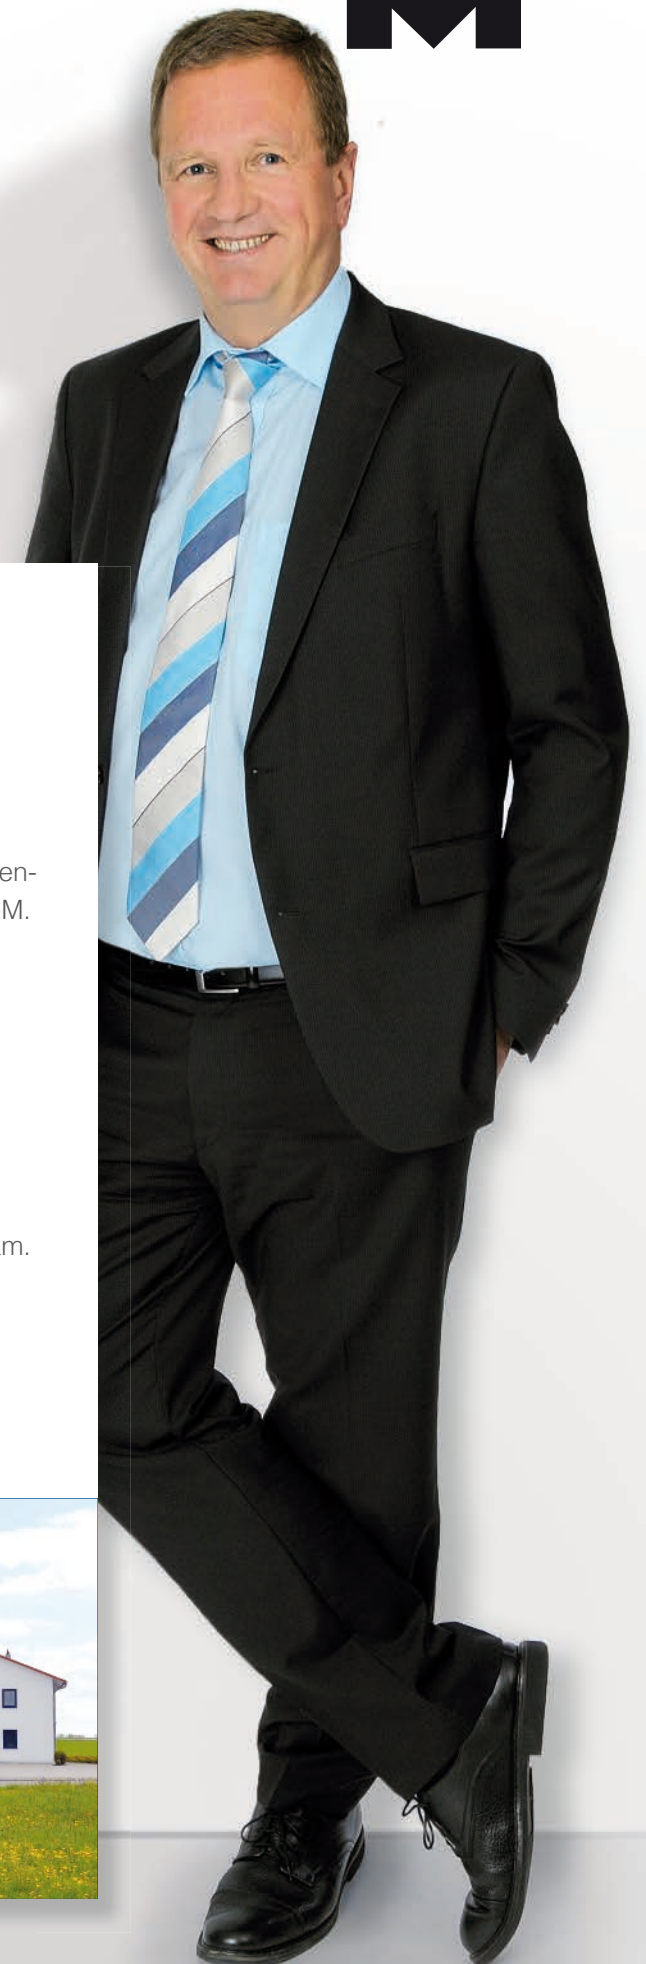

For TopM, customer focus is not just a question of marketing or empty promises – neither is our commitment to quality. What we strive for is our customers' success and the foundation of a long and trusting partnership in every respect.

TopM was founded in November 1991. Looking back, our company's history is quite impressive:

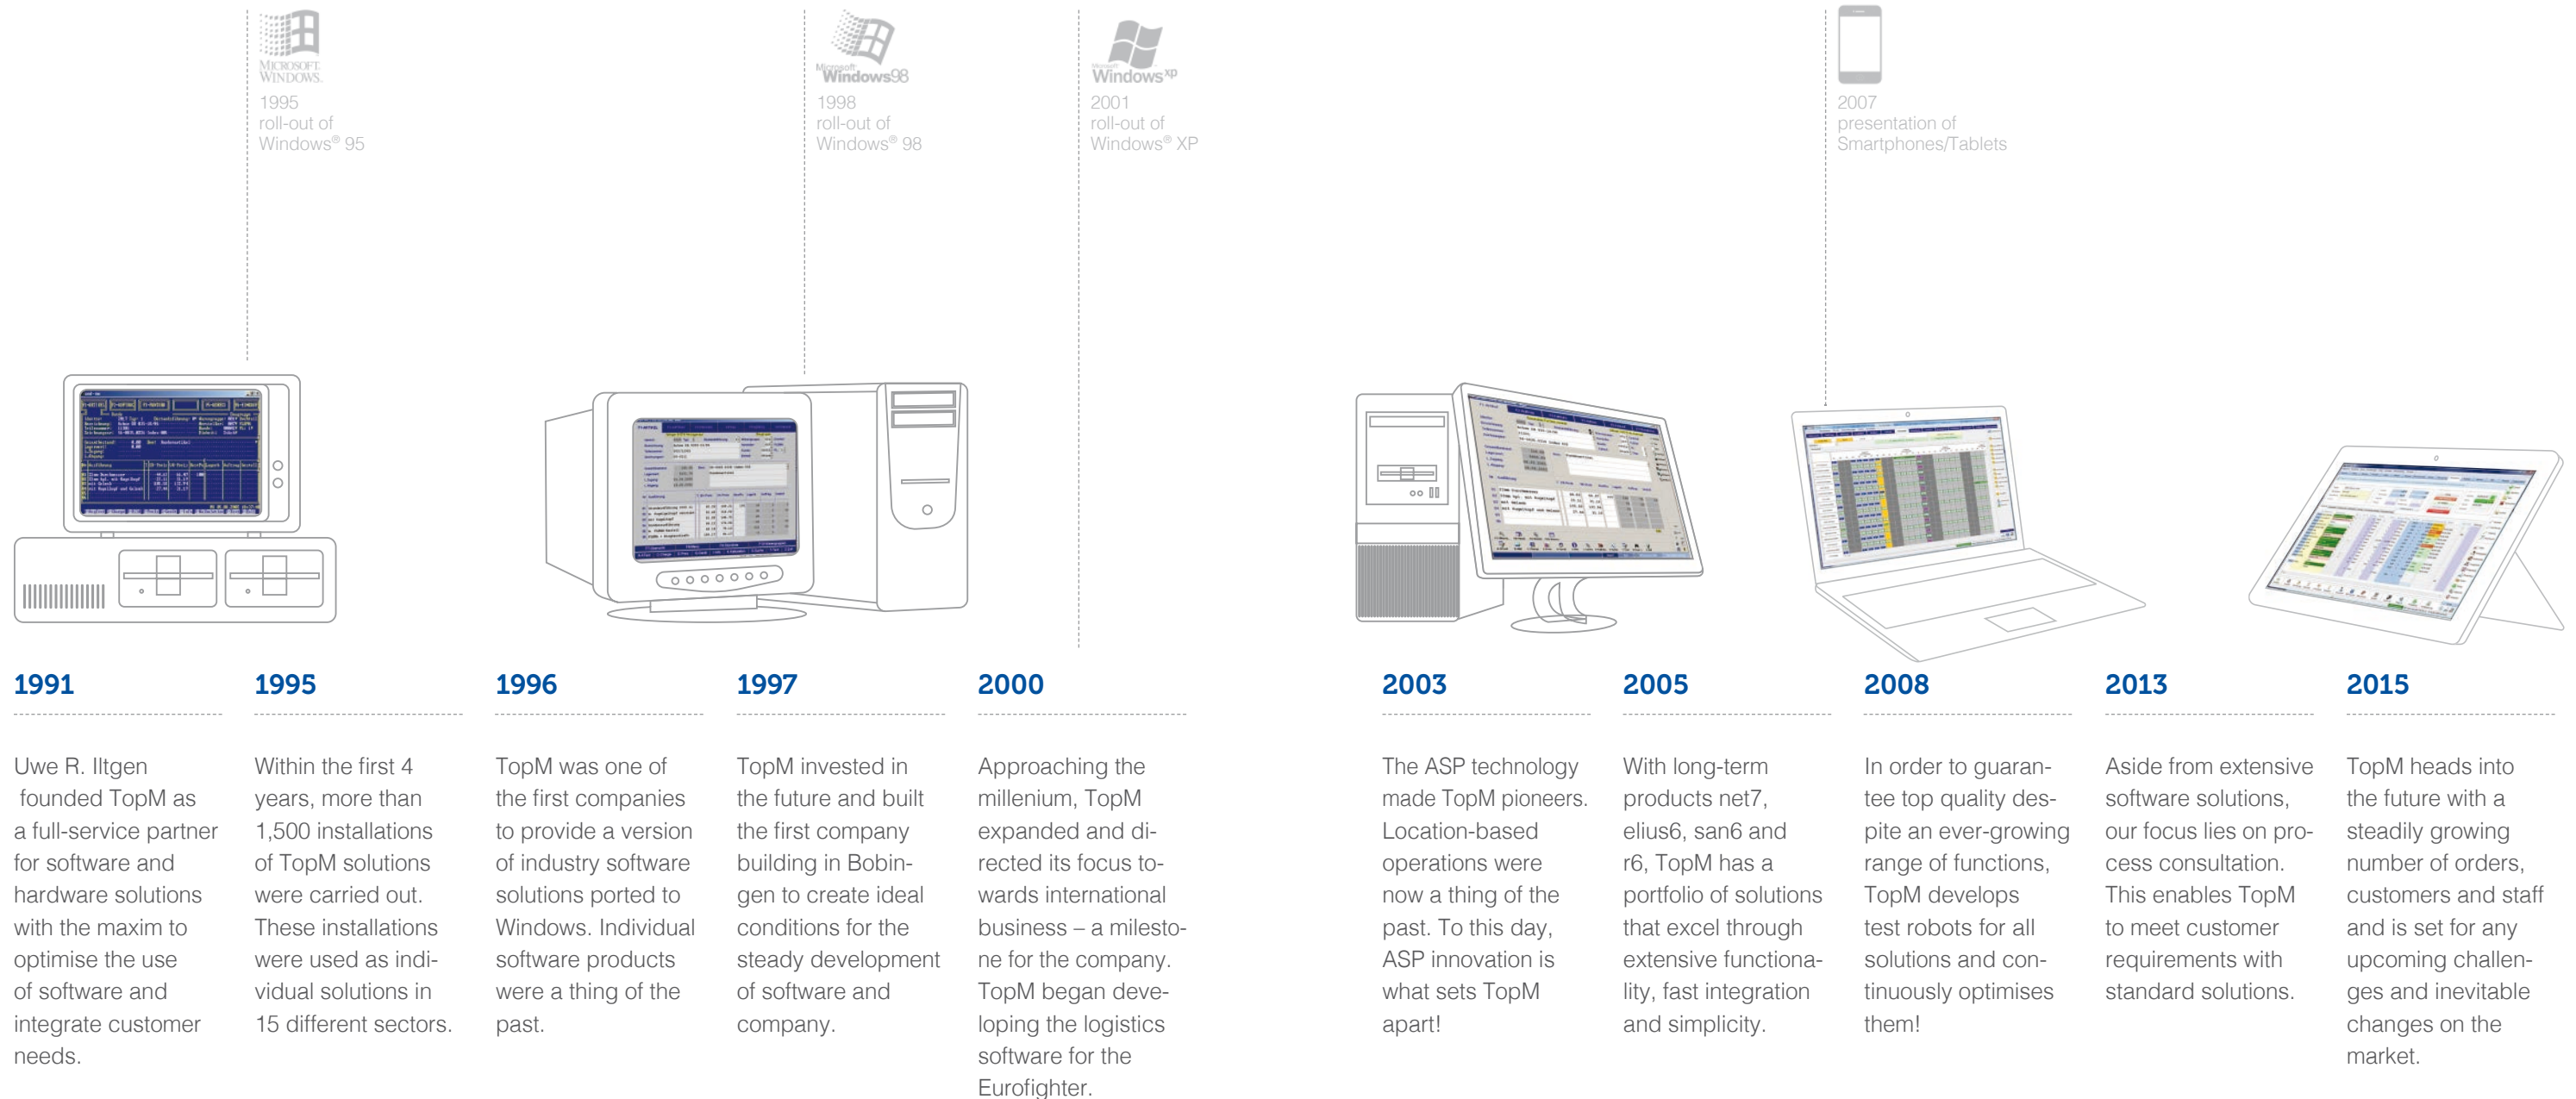

- outstanding balance sheets
- continuous growth
- market-leading software products
- a steadily growing and happy customer base

With equity capital of 3 million Euro in liquid assets, independence from banks has become a matter of course for TopM. We are in the fortunate situation of being able to provide exactly what our customers need and what we deem necessary, without having to satisfy investors' demands. This creates a zone in which ideas can evolve and be implemented successfully – resulting in the development of new features that TopM regularly presents as one of the first providers on the market, making us an innovative partner for your company. Here at TopM, we are proud of our achievements as a team.

Uwe Iltgen
Owner and CEO

Tradition and innovation

Quality meets flexibility

To us, good is never good enough!

This definition of quality is simple and clear. What is harder is meeting these extremely high quality standards. For this reason, TopM relies on a team of 60 software advisors, developers, project managers and technicians – because behind each project there are people who develop and implement new solutions with commitment and passion. They ensure TopM's quality – and it is them who make customers become references for new business.

At TopM, our staff is able to repeatedly adapt to new situations. We know that each customer has unique wishes and requirements. To us, flexibility means being able to successfully realise a new project in all its complexity at any time.

Being based in Bobingen near Augsburg, our skills and knowledge are located in one place, which ensures short communication channels in a company structure characterised by a flat hierarchy. Direct contact between us and our customers allows for personal communication and fast solutions.

Safeguarding innovation and investment

Our customers don't invest in software - they invest in safeguarding their company's future. Investments have to be safe and profitable as soon as possible. This may seem simple, but at the same time it is highly complex. Especially in the area of software installation, countless factors can influence the success of your investment.

As an owner-led, medium-sized company, TopM has all it takes to successfully work for you. Quality, innovation, experience and flexibility are the parameters of successful cooperation. Working with TopM, you can be sure you are relying on a solid partner for the long term. You can rest assured in the certainty of developing your company with a secure investment.

sectors

More than just a software solution

net7 Equipped with the functionality of an end-to-end software solution for companies with **single-unit or serial production**. This comprehensive solution covers merchandise management and product planning as well as control functions and many more.

elius6 Optimised for the **wholesale and retail sector** as well as the service industry, elius6 offers a wide range of functions: merchandise management, branch connection and a complete cash sale register. Therefore, a broad portfolio of trade sectors and company sizes is not only covered, but supported perfectly.

r6 r6 has been developed for **tyre companies** who want things to run smoothly. It meets the requirements of garages as well as wholesalers and retailers. With extensive standardised interfaces and the included master records of nearly all types of tyres, r6 can be installed with minimal effort.

san6 A software package for companies in the German **healthcare industry** – equally covering the special requirements of medical stores, orthopaedics and medical technology. The ongoing maintenance of accounting lists and supplier catalogues as well as a full integration of health insurers for billing purposes make san6 the market-leading solution in this sector.

netlog With netlog, TopM offers a solution for **aerospace technology** covering the fields of maintenance, repair and lifetime monitoring of military systems – especially aircraft and related devices in military operations. Several military bodies are efficiently supported through netlog.

You can find the entire service portfolio of TopM and its software solutions on our website.

fibu7 is a GOB-certified complementary software for accounting which can be integrated into all TopM product solutions. It offers standard booking functions as well as tools for evaluation, cost accounting and fixed assets management.

When archiving business documents in a DMS, security, completeness and protection against forgery are key, as is the availability of a search function. reVis makes the vision of a paperless office reality through IDW PS880 certification. Integrated in TopM's product solutions, documents can be stored and archived in reVis in an audit-proof manner and viewed at any time. Both NCI and CI data can be processed.

The TopM webserver allows you to retrieve your data using browser-based access. Thanks to the webserver, data from TopM product solutions can be accessed and captured live via mobile devices such as smartphones or tablets and B2B webshops can be displayed.
